Build it better with Catnic

Catnic has pioneered the steel lintel for over 50 years and designs, manufactures and supplies the construction industry with technically superior products.

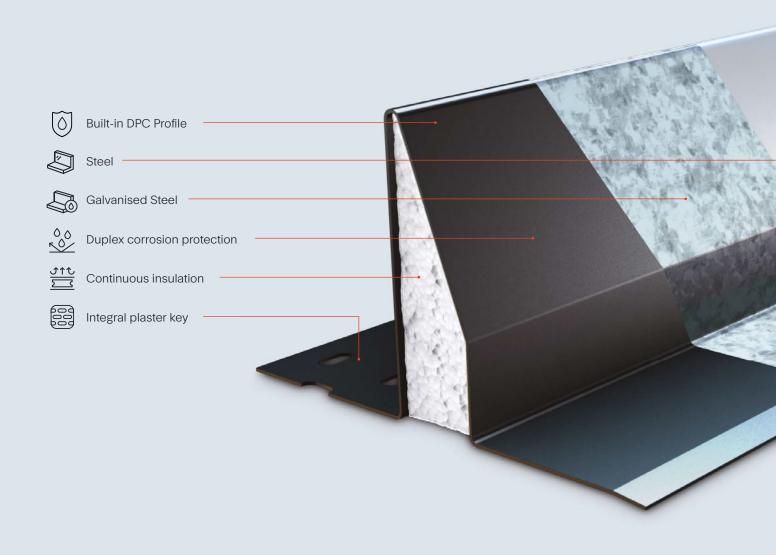

Catnic was the first:

- Lintel manufacturer to be certified to BES 6001, maximising the potential for obtaining credits under the Responsible Sourcing of Materials sections of BREEAM, the Code for Sustainable Homes and CEEQUAL
- To develop the steel lintel in the UK and the first to gain both BBA Approval and the coveted Kitemark to BS 5977
- Manufacturer to employ the revolutionary Duplex Corrosion Protection System on its lintel as a standard offering
- To incorporate a built-in damp proof course into its lintels (excludes TBL & short span CG ranges)
- To provide a built-in plaster key
- To CE mark its lintel product range

Far from just leading, over the years Catnic have worked with the BSI to establish the standards for lintels in this country and continue to develop and invest in improving on these standards with our extensive range of products and unique features.

Features of Catnic Lintels

Catnic lintels offer many benefits to specifiers and builders through a combination of their design, thermal efficiency and corrosion protection. These major features ensure that Catnic lintels are widely used and respected, throughout the building industry.

Built-in Damp Proof Course (DPC) Profile

Many Catnic lintels offer a unique profile shape that combine with the unique Duplex Corrosion Protection or stainless steel to create an effective barrier that acts as a built-in DPC, meaning any water penetrating into the cavity automatically transfers across the sloping face of the lintel and is disposed of externally.

The ease of brick laying directly onto a solid surface eliminates the risk of damage while installing, or any possibility of incorrectly installing a separate DPC membrane. The result is an aesthetically pleasing, cleanline finish above the window head that saves time and cost. In areas of sheltered to medium exposed weather conditions there is no need to install a separate DPC (excludes TBL & short span CG ranges).

Integral Plaster Key

Many Catnic lintels come complete with an integral plaster key that avoid the hazards of working with a mesh key. In addition the unique design of the perforated base plates on CG, TS, CH, TH, CX, TX lintels minimise cold bridging without affecting the structural performance.

Continuous Insulation

Many Catnic lintels are supplied with CFC and HCFC free insulation maximising their thermal efficiency and compliance with Part L.

The insulation is accurately shaped to optimise the thermal performance extending continuously along the full length of the lintel and cannot be dislodged, leaving no potential 'cold spots'.

Duplex Corrosion Protection System

Initially, Catnic standard lintels are manufactured from hot-dipped galvanised steel to BS EN 10346: 2015 plus coating type Z275.

A coating of thermal setting polyester powder is then applied by an electrostatic process, further protecting the lintel. High temperature curing then produces a tough durable surface highly resistant to impact, abrasion and damage during rough on-site handling. This double method of protection gives Catnic lintels inherent benefits over those offered by other manufacturers using the more traditional pre- or postgalvanised steel techniques. The protection system complies fully with the chemical and physical test requirements outlined in table 2 of BS 5977: PART 2: 1983 and table C.1 of BS EN 845-2:2013 +A1:2016 for lintels effectively having their own built-in DPC.

Both of these processes rely on just a simple coating of zinc to provide cathodic protection. The zinc protects the steel, but is itself liable to rust with aqueous alkaline solutions leaching from the building fabric and therefore corrode. The famous black coating makes Catnic lintels instantly recognisable and provides an effective barrier against moisture or chemical attack leached from the mortar and masonry.

Thermally Broken **Lintel Solution**

Catnic's latest innovation is the biggest evolution in steel lintel design for a generation. An elegant, simplistic design derived from extensive research and rigorous development testing.

Offering a sophisticated, practical solution to the latest changes in Building Regulations, Catnic's patented TBL range is the most thermally efficient steel lintel solution on the market.

Utilising the strength of steel combined with the thermal insulating properties of a high-density core, it's design provides the thermal performance of separate lintels, whilst offering users the same stable installations benefits of a traditional cavity wall lintel, providing:

- Industry leading linear thermal transmittance psi values of 0.02 to 0.05
- Safe working loads in line with Catnic's existing Cavity wall lintels
- galvanised steel

from 90 to 205mm, in standard, heavy and extra heavy duty performance categories

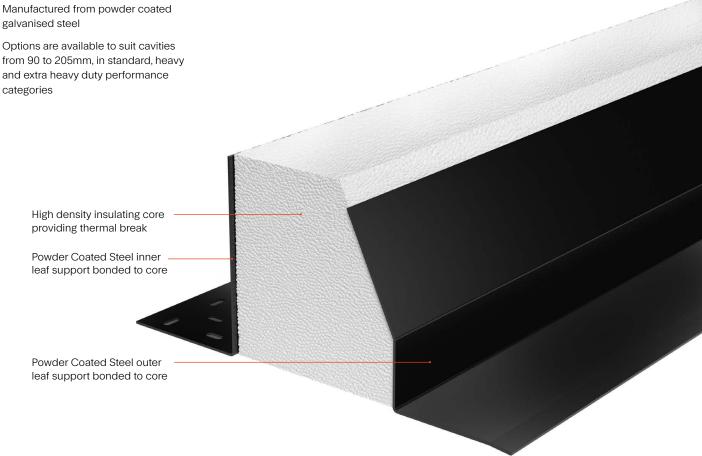

Achieving this remarkably low psi value ensures Catnic's TBL range will always meet the performance criteria requirements of Appendix R found in SAP 10.2 providing easy compliance with Part L of the Building

To limit the risk of surface condensation or mould growth the temperature factor for a detail used in the external wall of a dwelling must be greater than 0.75. Catnic Thermally Broken Lintels a have temperature factor of at least 0.95.

This unique design enables a complete thermal break between the inner and outer leaf of the cavity wall construction, results in outstanding thermal performance values of:

Psi value 0.02 to 0.05 W/mK

Independently verified by the Building Research Establishment.

Thermally Broken Lintel

In response to changes in Building Regulations driving increasing level of thermal performance Catnic developed the Thermally Broken Lintel.

Thermal

- Lowest psi value for any lintel currently available
- Thermal performance independently verified by the BRE
- Only lintel available with a complete thermal break between the inner and outer leaf – no brackets
- Only lintel range to fully meet the requirements of Appendix R of SAP 10.2

Structural

 Independently Tested in line with BS EN 846-9:2016
 Loads replicate existing safe working loads of the existing Catnic CG, CH & CX lintel ranges allowing simple conversion

Range

- · Cavity widths from 90 to 205mm
- Standard duty, heavy duty and extra heavy duty lintels
- · Standard and wide inner leaf options
- Mitred corner and bay window lintel

Installation

- No propping during construction
- Lintel profile designed to allow simple interface with cavity wall insulation
- Ideal shape for lying a DPC tray over

Thermal Performance

Target fabric energy rates, target CO₂ emission rates, and target primary energy rates form the foundations of the Building Regulations Part L 2021. They set the energy requirements for the new buildings and are all influenced by the performance of the fabric. Selecting thermally broken lintels can play a significant role in reducing heat loss associated with thermal bridging.

Heat loss through the building fabric is expressed as a U value and measured in W/m²K, while heat loss via linear thermal bridges is expressed as a psi (ψ) value and measured in W/mK. The total fabric heat loss is the sum of the combined fabric U value multiplied by the total area, plus the product of the psi value of junctions and their total length.

Improving the thermal performance of the walls emphasises the increasing proportion of heat lost through thermal bridges in the building fabric such as lintels. Lintels can be a major thermal bridge in a building, and the lower their psi value, the better for overall performance.

Improved psi values can be achieved by using:

- · Lintels with perforated based plates
- Lintels without a base plate
- Thermally broken lintels

The graph below highlights the typical psi values that can be achieved by using Catnic lintels.

| CATNIC CX90/100 | CATNIC CG90/100 | 0.36 | CATNIC CG90/100 | 0.18 | CATNIC TBL | 0.05

SAP 10.2 2012 Appendix R

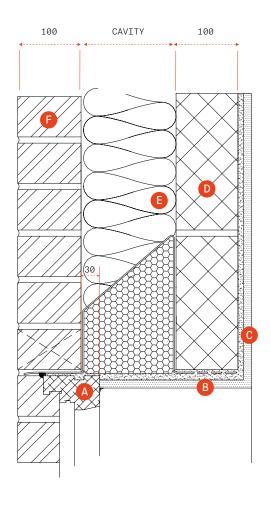

Part L of the Building Regulations has got progressively more complicated. To make it easier to comply an optional "standard recipe", based on the Part L 2021 Notional dwelling, has been introduced. A summary is shown in the table opposite, full details can be found in SAP 10.2 Appendix R.

If you follow the standard recipe you will achieve the CO_2 and fabric energy efficiency targets to comply with Part L. The standard recipe requires a lintel psi value of 0.05 W/mK. All Catnic Thermally Broken Lintels will provide psi values or 0.05 W/mK or better.

| Summary of notional building requirements | | | |
|---|---|--|--|
| OPENING AREAS | SAME AS ACTUAL UP TO 25% OF FLOOR AREA | | |
| EXT. WALL (W/m²K) | 0.18 | | |
| PARTY WALLS (W/m²K) | 0 | | |
| FLOOR (W/m ² K) | 0.13 | | |
| ROOF (W/m ² K) | 0.11 | | |
| WINDOWS AND GLAZED DOORS WITH GREATER THAN 60% GLAZED AREA | 1.2 (FRAME FACTOR = 0.7) | | |
| AIR PERMEABILITY m³/(h·m²) AT 50 PA | 5 | | |
| ALLOWANCE FOR THERMAL BRIDGING | STANDARD PSI VALUES FROM APPENDIX R OF SAP | | |
| VENTILATION SYSTEM | NATURAL (WITH EXTRACTS) | | |
| BOILER | EFFICIENCY, SEDBUK 2009 = 89.5% | | |

Lintel psi Values

Psi values are not just affected by the lintel itself but by wall construction, insulation type and window position. Catnic's range of cavity wall lintels are continually evolving and we now have a wide range of lintels that comply with Part L of the Building Regulations and are able to satisfy the different thermal and structural requirements of the customer.

Data Sheets

A range of standard psi value data sheets are available on the Catnic Website covering traditional cavity wall lintels and Catnic's Thermally Broken Lintel. Visit catnic.com

| | Materials | Thickness (mm) | λ Value (W/mK) |

| | CX150/100 | EXTRA HEAVY DUTY | 0.416 | 0.396 | |

CG lintel psi values quoted take into account any additional heat loss that occurs through the discrete brackets within the lintel. CG Lintel psi values based on 1500 mm long lintel design.

| Thermally Broken Cavity Wall Lintel | | | | | |
|-------------------------------------|-----------|---------------------|------------------------|---------------------|--|
| CAVITY | LINTEL | | PSI VALUE (W/mK) | | |
| (mm) | CODE | TYPE | PARTIAL FILL CAVITY | FULL FILL CAVITY | |
| 100 | TS90/100 | STANDARD DUTY | 0.042 | 0.043 | |
| | TX90/100 | EXTRA HEAVY DUTY | 0.050 | 0.048 | |
| 150 | TS150/100 | STANDARD DUTY | 0.033 | 0.029 | |
| | TX150/100 | EXTRA HEAVY | 0.037 | 0.030 | |

To limit the risk of surface condensation or mould growth the temperature factor for a detail used in the external wall of a dwelling must be greater than 0.75. Used in the above details, the Catnic CG, CH, CX, TS, TH & TX Lintels all have temperatures factors greater than 0.75.

All calculations have been carried out following the conventions set out in BR 497.

How to select a Lintel

Once you have established these, you will be able to choose the correct lintel for your job by referring to the relevant tables in this guide.

1 Wall Construction

Cavity Wall

If the construction is a cavity wall, see section on pages 14 - 39. You will need to know the cavity wall dimensions to choose the correct lintel:

- The external leaf dimension
- · The cavity dimension including insulation
- The internal leaf dimension

External Solid Wall

There are three forms of lintel for external solid walls:

- Single element lintels for a single leaf of brickwork
- Two-piece lintels shaped to carry the two separate leaves of a 215mm fair face brick wall
- Box profile lintels which have a toe for use in solid brick or block walls from 200mm – 215mm thick.
- External solid wall lintels can be found on pages 44 - 47.

Timber Frame

For timber frame constructions, you need to know:

- The external leaf dimension
- Cavity dimension

Once you have these dimensions, please refer to the Timber Frame lintels section on pages 40 - 42.

Internal Partition & Load Bearing Wall

Lintels for internal partitions and load bearing walls (pages 48 - 49) come in three styles:

- Corrugated lintels for non-load bearing applications
- Channel section lintels for loadings involving blockwork and floor joists
- Box profile lintels for heavier loads including point loads and wider openings

② Lintel Length

The length of lintel required is calculated by establishing the total width of the structural opening and adding 150mm (200mm for CXL lintels) end bearing allowance for each end. For example, an 1800mm structural opening will require a 2100mm lintel (2200mm for CXL).

③ Applied Load

All lintels are designed to carry a specific safe working load (SWL). If you are not skilled in the method of load assessment, or the load has not been supplied to you by a third party, for advice please contact Catnic Technical Services on 02920 337900.

Several styles are available from Catnic for use in cavity wall construction, these include our traditional standard range together with our latest innovation Thermally Broken Lintels, available to suit Standard, Heavy and Extra Heavy duty applications.

Extra Heavy Duty

TX and CX

Cavity Wall Lintels

Two styles are available from Catnic for use in cavity wall construction.

Standard Duty

TS and CG

- Triangulated masonry load
- Supporting uniformly distributed masonry load
- Supporting uniformly distributed timber floor and roof loads
- Suitable for fair faced inner leaf masonry

Heavy Duty

TH and CH

- Supports concrete floors
- Attic truss loads
- Larger span multiple truss loads
- Triangulated masonry load
- Supporting uniformly distributed masonry load
- Supporting uniformly distributed timber floor and roof loads

Conditions of use

- Nominal 150mm end bearings
- Both leaves are raised together
- One course of block prior to installation of floor/roof
- Refer to 'Cavity Wall Lintel Installation Guide' on page 16

Notes

Concrete Floor Loads

When using the Catnic CH, TH, CX, TX open back ranges with concrete floors, always ensure that the blockwork is built tight against the inner vertical face of the lintel and that a mortar joint is added to the top of the blockwork so that the floor units have an even spread over the inner flange of the lintel. For guidance on installation refer to page 16.

Achieving Loading Figures

To achieve the CH, TH, CX, TX loading figures indicated, lintels must be built-in as illustrated. ensuring that the blockwork infill is well-jointed during construction and compatible with the strength of the masonry above individual consideration.

Allows masonry to be built up continuously on both outer and inner leaf.

Benefits

Materials used in Lintels

The CG, TS, CH, TH, CX, TX ranges are formed from galvanised steel, then powder coated

Duplex corrosion protection

Ensures optimum durability and longevity

Integral Plaster key

With staggered slots applied to the inner flange and ribbed underside of insulation (perforated steel baseplate on CH and CX range)

Continuous insulation

Maximising thermal efficiency, minimising cold bridging

Built-in DPC

Saves time in construction and means cavity is easy to clean without risk of damage to DPC (refer to page 68) (excludes TBL & short span CG ranges)

Application Guidance

Whilst the above information is intended to offer general guidance regarding typical applications, it should not be considered as comprehensive. Requirements not fully covered by the above should be referred to our technical services department for individual consideration..

Safe Working Load

The SWL (safe working load) is based on the total UDL (uniform distributed load) over maximum span using 150mm end bearings.

Glossary of Technical Terms

For a definition of these terms see the Material Specification and Clauses page 70.

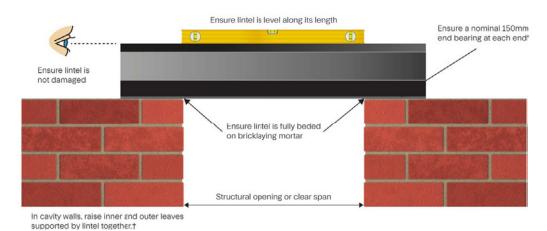

Accessories

Arch Centres, Soffit Cladding (refer to page 61).

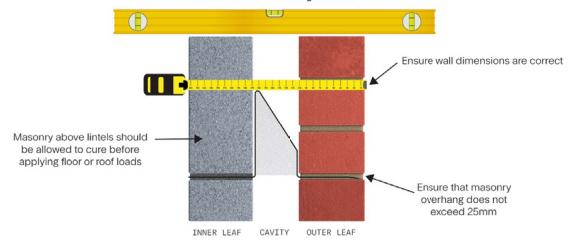

Cavity Wall Lintel Installation Guide

Catnic is committed to trouble free installation.

Ensure lintel is level along its width

✓ Do

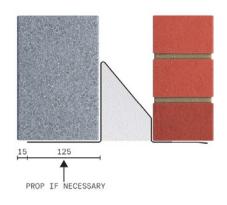

- Install a separate DPC in severe exposure conditions. A Catnic open back lintel with an additional DPC membrane installed in accordance with normal practice provides the best possible protection (page 63).
- Locate the window/door frame so that the drip on the front of the lintel projects forward of the drip on the front of the frame. It is good building practice to insert a flexible joint between the lintel and the top of the frame.
- Ensure that timber floor joists and roof trusses have a full block depth between them and the lintel flange on Catnic open back lintels.
- Refer to the Catnic 'How to Install a Lintel Supporting Concrete Floors' or the Steel Lintel Manufacturers Association guidelines (available on request) when using CH, CX, TH, TX open back lintels to support concrete floors.
- Consider the use of our soffit cladding for all coastal sites.

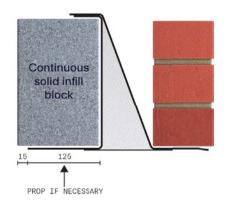

× Do Not

- × Use damaged lintels.
- X Apply point loads without prior consultation. Where the loading or a substantial part of it is applied as concentrated loads, each concentrated load must be supported over a length of lintel of not less than 200mm. In such cases, the total loading must not produce bending moments or shear forces greater than those produced by the uniformly distributed loads specified in the relevant data tables.
- × Allow blockwork to overhang the lintel by more than 25mm.
- Apply concrete floor loads without ensuring that the total loads are checked by a structural engineer, or by Catnic Technical Services.
- × Cut CG type lintels under any circumstances.
- f x Apply point loads directly onto lintel flanges.

Wide inner leaf lintels used with 140mm dense blocks

To ensure the flanges are equally loaded the Code of Practice should be strictly adhered to when building the masonry i.e. one row of blocks should be raised on the inner leaf, then three courses of brick on the outer leaf. Wall ties should then be installed and another row of blocks on the inner leaf followed by three courses of brick on the outer and so on. This process ensures that the lintel flanges are equally loaded and helps prevent rotation.

Propping

- When propping, a horizontal board should be placed along the underside of the lintel soffit, this will prevent any point loading, which could cause localised deformation of the lintel. On small openings a single prop should be placed centrally within the openings and wedged into place. The prop can be removed after the wall ties are effective. The number of props used should be increased for larger openings.
- The 140 mm dense blocks should be installed tight against the inner web of

the lintel.

 Therefore, the overhang of blockwork on the lintels inner flange could be measured at 15mm.

Installing A Lintel Supporting Concrete Floors

In addition to the Cavity Wall Installation Guide, please read the following for installing concrete floors with Catnic steel lintels.

- Check that the correct lintel is being used according to the manufacturer's lintel schedule/design criteria.
- Bed the lintel on full blocks and allow mortar to cure before applying concrete floor loads.
- Raise both leaves of cavity wall together and allow masonry to cure sufficiently before applying heavy loads. Alternatively prop the lintel if large loads are to be applied to fresh masonry.
- When using the Catnic CH, TH, CX, TX open back range with concrete floors, always ensure that the blockwork is built tight against the inner vertical face of the lintel and that a mortar joint is added to the top of the blockwork so that the floor units have an even spread over the inner flange of the lintel.
- Avoid shock loading lintels during the installation of concrete floor units and also any sideways loading while being lifted into position.
- Precast flooring units should be laid on a mortar bearing of the full inner leaf wall width and should not be dragged over supports.
- Avoid loading newly laid floors with building materials.
- Lintels must be built-in as illustrated, ensuring that the blockwork infill is well jointed during construction and compatible with the strength of the masonry above.

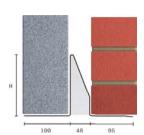

Notes

^{*} For advice on installations where end bearings can be reduced to not less than 100mm please contact our Technical Services Department on **029 2033 7900**

50-65mm Cavity Wall

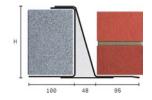

100-115mm Inner Leaf

Extended Cavity Wall Lintel Range

As well as the standard range of cavity wall lintels shown Catnic have an extended range of lintels to cater for a range of different wall construction including:

- Very wide inner leafs
- · Cavity widths greater than 165 mm
- Reduced outer toe to suit cant brick and chamfered stone heads
- Extended outer toes to support a range of different stone thickness

Find the perfect Lintel

Catnic offer a vast range of lintels, if you can't find what you're looking for please contact our Technical Service Department on **02920 337900** or email us at **catnic.technical@tatasteeleurope.com**

Cavity Wall Extreme Load Lintels

Designed to support extreme loads or to be used at long spans in external cavity walls.

Cavity wall 'CXL and CBP' fabricated lintels

CXL / CBP

Standard increment lengths

Overall lengths are available in 50mm increments for lengths up to 6600mm.

Optional extra

As an optional extra, CXL & CBP lintels can be supplied with expanded metal mesh secured to the base plate.

Load ratios

To achieve the loading figures shown, the lintel must be laterally restrained and have 200mm end bearing supports and inner to outer load ratios between CXL 5:1/19:1 (kN) and CBP 1:1/3:1 (kN).

Separate DPC

A separate flexible DPC must be installed during construction.

Benefits

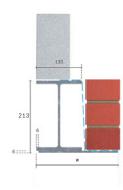

Materials used

Supplied in post galvanised finish. Lintels manufactured from a universal beam section and 6mm structural grade steel plate Grade S275 to BS EN 10025: 2004 and hot dip galvanised after manufacture to BS EN ISO1461: 1999.

Cavity wall closed eaves lintel

Easy-to-use open back profile

Open back style lintels allow masonry to be built up continuously on inner leaf.

Benefits

Duplex corrosion protection

Ensures optimum durability and longevity

Continuous insulation

Maximising thermal efficiency, minimising cold bridging

Integral Plaster key

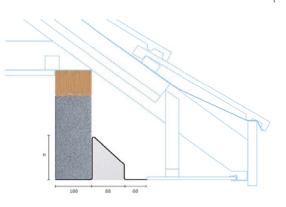

With staggered slots applied to the inner flange and ribbed underside of insulation

100-115mm Inner Leaf

90-125mm Cavity

Standard lengths are available in 150mm increments up to 1800, 300mm increments from 1800mm to 2700.

| CGE90/100* | | | |
|-------------------------|----------|-----------|-----------|

| WEIGHT (kg/m) | 6.1 | 6.6 | 10.6 |
| NOMINAL HEIGHT 'H' (mm) | 95 | 115 | 115 |

^{*}To achieve the stated safe working load (SWL), closed eaves lintels must be built in with solid blockwork and continuous timber wall plates. Allow 150mm at each end for bearing support.

Notes

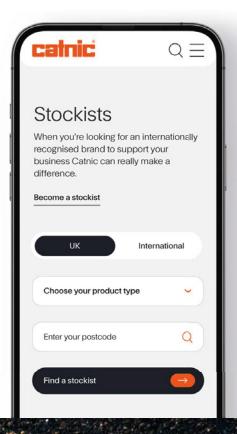

Catnic's 60mm reduced toe range on page 32 is also suitable for cavity wall closed eave application

Lintels for thin joint construction

Catnic has designed two thin joint solutions for the UK construction industry available to suit cavities up to 150mm: 'CTJ90' and 'Box and Angle' lintels.

Box and Angle

The CTJ90 lintel is designed specifically for use with thin joint construction.

The CTJ90 lintel has been designed to suit the requirements of 102mm outer leaf with 90mm to 150mm cavity. Inner leaf support is achieved through a standard Catnic box lintel and propping during construction is eliminated thanks to a unique plastic fixings connection.

The CTJ90 closes the cavity and removes the need for an additional cavity closer.

Material

Hot dipped galvanised sheet steel coil to BS EN10346: 2015 and Z275 (min yield stress – 250N/mm²).

Finish

Black polyester powder coating.

The Catnic box and angle lintel system has been designed to accommodate the requirements of all thin joint wall construction.

This standard product provides the following benefits:

- Suitable for all possible cavity widths
- Reduced thermal bridging at window head
- Standard product

Material

Hot dipped galvanised sheet steel coil to BS EN 10346:2015 and Z275 (min yield stress – 250N/mm²).

Finish

Black polyester powder coating 0.035 +/-0.005mm thick for lintels, angle lintels up to 2400mm are Z600 silver.

Benefits

Reduced build time

Within minutes the thin joint mortar is set and the next course can be laid. This permits continual laying and avoids settlement problems commonly associated with conventional mortar.

Quick weatherproofing

The CTJ & BSD ranges are formed from galvanised steel, then powder coated.

Flexible construction

Thin joint can be used on both external cavity walls and internal partition walls, as well as party wall construction.

Notes

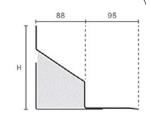

Whilst the above information is intended to offer general guidance regarding typical applications, it should not be considered as comprehensive. Requirements not fully covered by the above should be referred to our technical services department for individual consideration.

CTJ90 Lintels

90-105mm Cavity* All Cavity Widths

102mm Outer Leaf

Standard lengths are available in increments of 150mm at lengths of up to 3000mm, and 300mm at lengths from 3000mm to 3600mm.

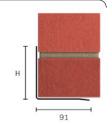

| СТЈ90 | | | | | |

Timber Frame Lintels

The timber frame range consists of single elements lintels with a sloping outer face and duplex corrosion protection, which together provide a built-in DPC.

CTF

Restraint clips

Allows vertical differential movement of timber frame.

All timber frame models must be secured with restraint clips (supplied) and a batten (not supplied) to prevent lateral deflection (twist) during the building stage and to achieve the loading figures shown.

Benefits

Duplex corrosion protection

Ensures optimum durability and longevity

Built-in DPC

Saves time in construction and means cavity is easy to clean without risk of damage to DPC (refer to page 68)

Notes

Propping

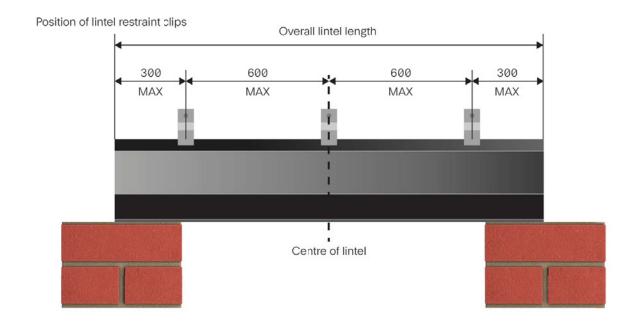

Lintels should be suitably propped during construction. Lintels for timber frame construction are supplied with lintel restraint clips (free of charge), which must be screw or nail fixed to the timber frame to allow for differential movement between the timber structure and the brick facing.

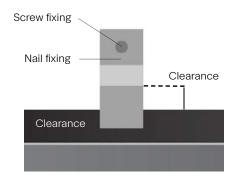

Safe Working Load

The SWL (safe working load) is based on the total UDL (uniform distributed load) over maximum span using 150mm end bearings.

Installing a Timber Frame Lintel

In addition to the cavity wall installation guide, please read the following for Catnic timber frame lintel installation.

- When propping, a horizontal board should be placed along the flat underside of the lintel soffit; this will prevent any point loading, which could cause localised deformation of the lintel flange.
- On small openings a single prop should be placed centrally within the opening and gently wedged into place.
- The number of props should be increased for larger openings. Generally props should be installed at maximum centres of 1 metre.
- The prop can be removed after the mortar has cured and the wall ties become effective.
- A timber pinch batten should be fixed at the heel of the timber frame lintel in order to minimise any rotation.
- Catnic timber frame lintels (e.g. CTF's) are intended only to support an outer skin of brickwork where it is tied to an inner skin of timber frame and must be suitably propped during construction.

| Lintel Restraint Clips | | | | |
|------------------------|-----------------|--|--|--|
| LINTEL LENGTH (mm) | NUMBER OF CLIPS | | | |

External solid wall lintels

External solid wall lintels are manufactured from galvanised steel and powder coated for extra protection. Available in 'classic box' or two-piece inverted 'T' styles.

Classic Box

For use in 200mm and 215mm solid exterior walls

- Saves on brickwork
- Resists twisting during construction
- Instant full load use
- Box profile is designed to carry full load of wet masonry as soon as it is installed

Two-piece inverted 'T'

Designed to carry two separate leaves of 215mm fairface brick wall

Benefits

Duplex corrosion protection

Ensures optimum durability and longevity

Benefits

Duplex corrosion protection

Ensures optimum durability and longevity

^{*} CN50C is only available in the following lengths: 900mm, 1200mm, 1350mm, 1500mm and 1800mm

 $^{^{\}star\star}$ CN51C is only available in the following lengths: 2100mm, 2400mm and 2700mm

Internal Wall Lintels

For use in internal partition and loadbearing walls 75mm, 100mm and 140mm.

Internal wall lintels

Catnic lintels for internal partitions and loadbearing walls are available in either 'corrugated', 'channel' or 'box section' to accommodate different loads and openings.

Corrugated

For use in brick or block walls.

CN92 and CN102

Offers a cost effective solution for extra light duty loads. Suitable for nominal domestic loading.

Channel

For use in brick or block walls.

CN100

Offers a cost effective solution for light duty loads, as previous plus:

Suitable for masonry/timber floor loads.

Classic Box

For use in brick or block walls.

BSD, BHD and BXD

Universal application caters for all loading condition, as previous plus:

- · Direct floor or roof load
- · Supports concrete floor loads
- Supports point loads e.g. steel beams
- Suitable for 140mm blockwork

Benefits

Integral Plaster key

Lozenge shaped staggered holes to sides of corrugated profile

Benefits

Duplex Corrosion Protection System

Ensures optimum durability and longevity

Integral Plaster key

Lozenge shaped staggered holes to sides of corrugated profile

Benefits

Duplex Corrosion Protection System

Ensures optimum durability and longevity

Integral Plaster key

With staggered holes to three sides of box profile

Stainless Steel Lintels

The standard duplex corrosion protection system used on Catnic's range of lintels provides class leading protection against corrosion in all normal circumstances.

However there may be instances when, particularly aggressive environments or to increase the expected life of the lintel, a stainless steel lintel may be required.

Eurocode 6 – Design of masonry structures

Part 2: Design considerations, selection of materials and execution of masonry implies that the lintel material/coating specifications should be limited to austenitic stainless steel for two exposure classes – MX4 and MX5.

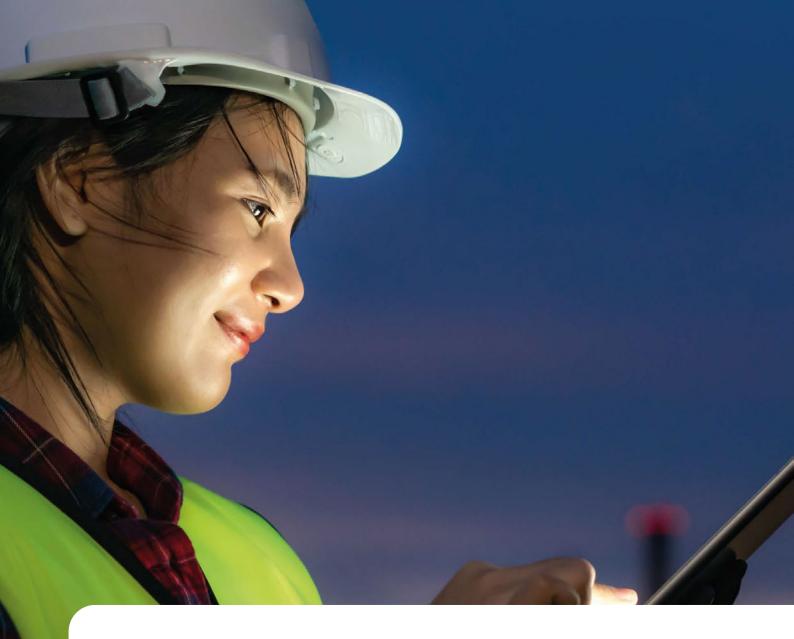

- MX4 Exposure to saturated salt air or seawater (i.e. coastal areas, buildings adjacent to roads that are salted during the winter).
- MX5 Exposure to the aggressive chemical environment (i.e. industrial areas where aggressive chemicals are airborne, harsh coastal areas where lintels are exposed to airborne chlorides seawater spray or mist). For buildings the MX5 exposure class higher than 304 grade stainless steel is recommended, due to the risk of severe pitting corrosion.

The outstanding anti-corrosion properties of stainless steel also make it suitable for specialist laboratory or medical applications, hospitals, residential care homes, schools, military buildings and prisons where the whole life expectancy and maintenance programme become key design considerations. Stainless steel is also a solution for high buildings, where lintels maintenance would be difficult.

Periodic cleaning is advisable on stainless steel, as with most building exterior materials. The frequency will depend on local conditions and the 'visibility' of the steelwork. Where cleaning and maintenance is difficult or costly, e.g. the outside of high rise buildings, then a more resistant grade may be appropriate.

Product Range

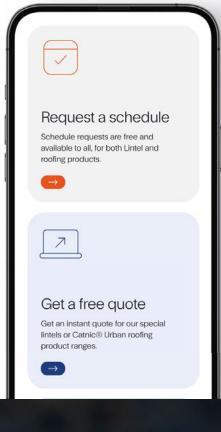

- All Catnic stainless steel lintels are manufactured from austenitic stainless steel, grade 1.4301 to BS EN 10088-2:2014
- Other grades of stainless steel are available on request.
- All Catnic galvanised steel loading tables apply.
- All stainless steel lintel lengths are manufactured to order, price and delivery on application.
- All standard stainless steel lintels from Catnic are BBA Approved under Agrément Certificate No. 91/2638
- Special lintels in stainless steel are available manufactured to order.

Require a special lintel design?
Request a free quote online today

Visit catnic.com to find out more

Catnic is committed to delivering a range of exciting shapes for unique designs and feature brickwork to inspire today's architects and builders.

Bespoke Designs

When a building requires a more unconventional support solution, Catnic is again, one step ahead and has an experienced team of feature design engineers dedicated to providing innovative design solutions to achieve the architect's vision.

Naturally, Catnic's technical support team has the breadth of knowledge and expertise to design lintels for the most creative of openings, with in-house facilities and skill to manufacture fabricated lintels to suit countless configurations.

Various styles of bay window, gothic and apex arches, bulls-eye and corner feature lintels for domestic and commercial applications are hand welded and post galvanised for extra corrosion protection, assuring lasting quality.

Although the majority of arches are semicircular, Catnic also offer gothic arches for Victorian styled buildings and apex designs for triangular or diamond shaped openings, curved on-plan for bays, in curved walls and also elliptical, parabolic, Arabian and segmental. The list is endless and there are limitless variations which Catnic have the capacity to fabricate virtually any arch specification required.

A fast and cost-effective fabrication service from a unique and specialised fabrication facility – means that bespoke lintels can often be delivered along with standard lintels minimising delays on site. Each lintel, as always, is manufactured to a high quality standard; hot-dip galvanised after manufacture to BS EN ISO 1461: 2009.

Feature lintels

While your imagination runs wild with creative openings, why not be inventive with brickwork too?

Catnic has the expertise to design and manufacture lintels for decorative brick and stone work, for example reduced toe lintels for discrete use with cant bricks.

Notes

Working Times

All times quoted as working days, include delivery, calculated from receipt of order and approved drawing (where applicable). All products are subject to availability.

Arches

When you want to make a feature of brickwork you may need more than a standard lintel, so Catnic offers both standard and innovative bespoke designs.

Standard Arch Lintels

Catnic have a standard range of ten semi-circular arches specifically designed and manufactured for domestic housing applications with nominal loadings. These arches offer considerable flexibility for feature brickwork with clear spans ranging from 600mm to 1200mm and are available from stock.

Arches

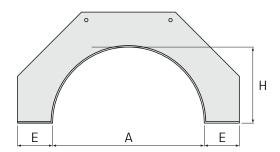

Semi-Circular Arch Lintel

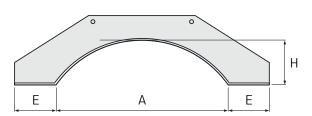

The semi-circular arch lintel is the most common feature brickwork opening providing a classical design line for any window or door. Catnic have ten different size semi-circular arch lintels available from stock.

Segmental Arch Lintel

The segmental arch lintel enables the creation of an opening where the arch whose profile comprises an arc smaller than a semi-circle. The segmental arch is made up of part of a circle, the centre of which is below its springing line.

Arches

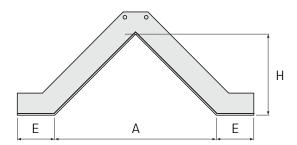

Apex Arch Lintel

The apex arch lintel enables the creation of triangular or diamond shaped openings. Commonly used with high vaulted ceilings enhancing the flood of daylight and perception of grandeur.

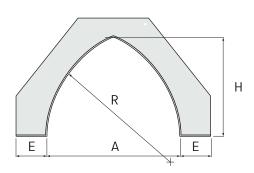

Gothic Arch Lintel

The gothic arch lintel enables the creation of pointed window and door openings to complement strong vertical lines, high vaulted ceilings, minimal wall space and buttressed walls often found in Victorian and gothic architecture. Gothic or pointed arches are formed from two segmental arches leaning together to form a point.

Arches

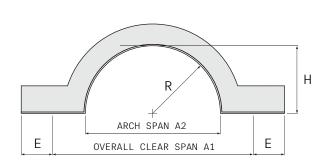

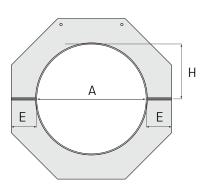

Venetian Arch Lintel

The Venetian arch lintel enables the formation of a classic design consisting of a three-part window composed of a large, arched central section flanked by two narrower, shorter sections having square tops.

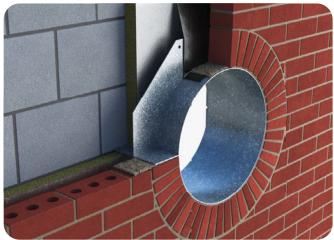

Bull's-eye Lintel

The bull's-eye lintel enables the creation of circular window openings and portholes.

Arches

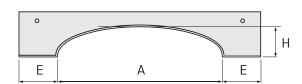

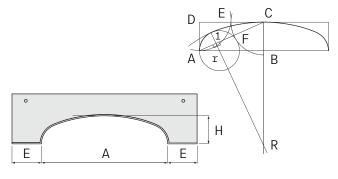

Elliptical Arch Lintel

The elliptical arch lintel enables the creation of a wider, shallower arch opening compared to that offered by the traditional steeper semicircular arch. The elliptical arch is formed by multiple arcs each of which is drawn from its own centre compared to a roman arch which is a semicircular arc drawn from a single centre point.

Parabolic Arch Lintel

The parabolic arch lintel enables the creation of openings with an artistically distinctive softer curvature than offered by a traditional, elliptical or gothic arch. The parabolic arch is formed by the creation of an arch in the form of the intersection of a cone with a plane parallel to the side of the cone, like a three-centred arch. To construct a parabolic curve please see the illustration above.

Draw rectangle ABCD. Make DE = DA. Make CF = CE. Bisect AF to make point 1. Project a right angle off AF at point 1 to find small radius r and project further to find large radius R.

Curved

Special Lintels

Corner

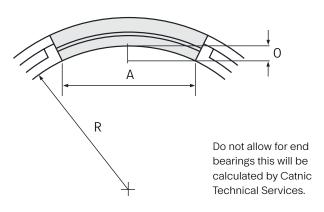

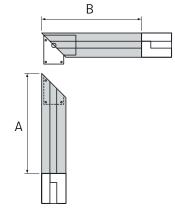

Curved On-Plan Lintel

The curved on-plan lintel (sometimes known as radius lintel or bow lintel) enables the creation of curved walls with openings. Curved lintels can be manufactured to suit customer specified radii.

Corner Lintel

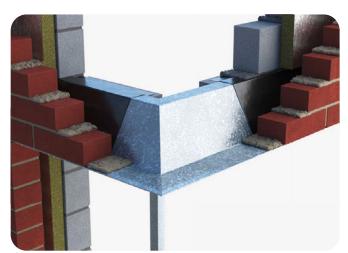

The mitred corner lintel enables the appearance of an unspoiled window openings on two perpendicular walls of a room. Corner lintels can be supplied with or without posts. When posts are required they come complete with spigots and base plates. Posts can be supplied to exact lengths or can be supplied over length, allowing them to be cut on site.

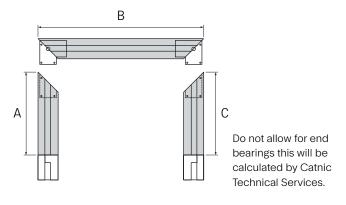

Bay

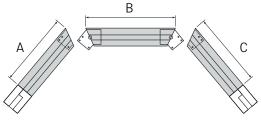

Square Bay Lintel

The square bay lintel uses perpendicular returns (90° angle) compared to the splayed bay lintel (greater than 90° angle) to create a window opening with three aspects. Square bay lintels can be supplied with or without posts. When posts are required they come complete with spigots and base plates. Posts can be supplied to exact lengths or can be supplied over length, allowing them to be cut on site.

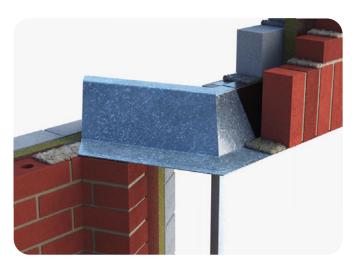

Splayed Bay Lintel

The splayed bay lintel projects the wall forward from the confines of the rest of the room to create an opening that attempts to make use of every last ray of sunshine. Introduced during the Georgian period, made popular in Victorian times and carried on in Edwardian housing the bay window is a realisation by architects that windows with three aspects could improve the outlook of living rooms. Splayed bay lintels can be supplied with or without posts. When posts are required they come complete with spigots and base plates. Posts can be supplied to exact lengths or can be supplied over length, allowing them to be cut on site.

Do not allow for end bearings this will be calculated by Catnic Technical Services.

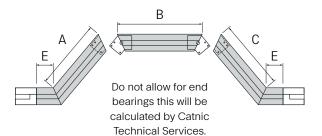

Bay

Splayed Bay Lintel with return bearings

The splayed bay lintel with bearings projects the wall forward from the confines of the rest of the room to create an opening that attempts to make use of every last ray of sunshine. Introduced during the Georgian period, made popular in Victorian times and carried on in Edwardian housing the bay window is a realisation by architects that windows with three aspects could improve the outlook of living rooms.

Splayed bay lintels can be supplied with or without posts. When posts are required they come complete with spigots and base plates. Posts can be supplied to exact lengths or can be supplied over length, allowing them to be cut on site.

Accessories

Catnic is committed to offering a range of high quality accessories to enhance the performance of Catnic steel lintels and to make their application even easier.

Lintel Arch Centres – Type AC

A PVC-u arch unit for use over openings in external cavity walls – traditional and timber frame – providing permanent centring for brick arch construction.

Allows easy construction of segmental arches. Includes integral weep vent.

Extruded from PVC-u for greater UV stability Catnic **Lintel Arch Centres** are designed to weather in accordance with the PVC-u windows. The design incorporates built-in weep vents for discharging the wind-driven rain that penetrates the external skin of a cavity wall.

Important note

If used with Catnic **Soffit Cladding**, the straight ends of the Arch Centre, which extend beyond the structural opening, should be removed before proceeding to stage vi. (see opposite)

This operation can also be carried out to avoid exposing the drip edge of the Arch Centre within the mortar joint at the bearing end. Cutting into the main body of the Arch Centre should not be carried out.

| Arch Centres | | | | |
|------------------|--------------------------|-----------|-------------------------------|-------------------------------|
| ARCH CENTRE CODE | ARCH CENTRE SPAN (mm) | RISE (mm) | MINIMUM OPENING SIZES (mm) | MAXIMUM OPENING SIZES (mm) |

| | | | | |

Installation Notes

- Do not use damaged Arch Centres.
- ii. Remove the Arch Centre from its protective wrapping.
- Check that the Arch Centre is correct for application (refer to the lintel specification).
- iv. Ensure the Arch Centre and lintel mounting surfaces are clean and dry.
- v. Locate the unit centrally over the opening to determine the position on the lintel. The front drip section should be trimmed off at the bearing end to allow for thin mortar joints and to enhance the appearance.
- vi. Locate the unit on the lintel at position previously determined, ensuring a tight fit to the edge of lintel toe.

Lintel Soffit Cladding

Lintel Soffit Cladding comes in 108mm width.

For improved protection

Lintel Soffit Cladding also provides extra protection, especially in coastal regions and in situations where much of the lintel soffit is exposed.

Material

A PVC-u pre-cut unit, supplied in white.

For improved appearance

An optional cladding, particularly suitable for use with PVC-u windows. The cladding was originally designed to give a more aesthetically pleasing appearance to rebated combined box lintels. These advantages have now been extended to cover all flush soffit lintels.

Installation Notes

- i. Ensure the lintel surface is clean and dry.
- Remove the protective covering to the length of the anchoring strip on the bottom of the stop ends.
- iii. Position to suit the perpendicular joint nearest the lintel ends, ensuring that the base and back of the stop end fit snugly into the front upstand of the lintel face.

Important Note

All external wall lintels fitted with lintel cladding must be installed with a flexible damp proof course (DPC) ensuring that the DPC projects beyond the front face of the cladding.

External Plaster Key

Manufactured from galvanised steel to BS EN 10346:2015 of grade Z275 the external plaster key provides a secure key for a rendered finish.

Application

Suitable for use with Cougar lintels (CG, CH, CX) timber frame lintels (CTF5, CTF7, CTF9, CN23), thermally broken lintels (TS, TH, TX) and External solid wall lintels (CN71 and CN81).

Storage

Unless required for immediate use on site, the product should be stored in a clean dry environment.

Installation Notes

External plaster key simply clips into place and is secured using a full length of adhesive bead (supplied by others). The PKS87 Plaster Key MUST be fitted to the lintel before the lintel is installed.

- Ensure plaster key mounting surface and under side of lintel is clean, dry and free from grease and dirt.
- ii. Locate plaster key centrally over lintel.
- Apply a 6mm bead of adhesive along the full length of plaster key in accordance with adhesive manufacturers instructions.
- iv. Locate the plaster key against the toe of the lintel at the position previously determined and rotate onto lintel, apply downward pressure to ensure full adhesive contact to both surfaces.
- v. Pull surfaces apart to allow adhesive to dry for 10-15 minutes
- vi. Reposition the plaster key onto the lintel base (as step iv) applying uniform pressure over the lintel length.
- vii. A strong initial bond is achieved whilst full bond strength results in 48-72 hours.

Quality Manufacture & Responsible Sourcing

Catnic is committed to innovation and constant improvement to meet the changes in building regulations.

Leaders in Technical Innovation

Our rigid adherence to quality control & compliance is your guarantee of technical superiority.

Quality

Catnic are committed to quality control and is a BSI registered company with quality management systems in accordance with BS EN ISO 9001: 2015, which provide a set of processes that ensure:

- Clarification and documentation of policies and objectives
- Reduce waste relating to customers' requirements to production with a view to achieving customer satisfaction
- Understanding how statutory and regulatory requirements impact on Catnic and our customers
- Clear responsibilities and authorities increasing motivation and commitment
- Consistency and traceability of products and services
- High level of internal and external communications

Material Specification

Catnic's standard lintels are manufactured from high quality grade galvanised steel to BS EN 10346: 2015 Z275, with a black coloured polyester resin finish. Catnic's CXL lintels and special lintels are manufactured from structural grade steel plate of grade S275 to BS EN 10025-2: 2019 and hot-dip galvanised after manufacture to BS EN ISO1461: 2009.

Catnic's stainless steel lintels are manufactured from austenitic stainless steel (chrome nickel alloys) grade 1.4301 (304) and do not require any further corrosion protection.

Thermal Performance / Insulation

All Catnic lintels for traditional external cavity walls are supplied fully insulated. Insulation extends continuously along the full length of the lintel, leaving no potential thermal bridges and cannot be dislodged.

Structural Performance

The structural data published in the loading tables included in this technical guide, was achieved in accordance with the requirements of BSEN 845-2:2013+A1:2016.

Independent Testing

Extensive testing was undertaken at the following test houses:

- The University of Wales, School of Engineering
- The University of South Wales, Commercial Services Centre for Engineering, Research and Environmental Applications (CEREA)
- Ceram Building Technology, Stoke-on-Trent

Fire Testing

Catnic lintels have been independently tested in accordance with the relevant parts of BS 476, Methods of Determination of the Fire Resistance of Loadbearing Elements of Construction.

Environment and Sustainability

Catnic are committed to protecting the environment by minimising the impact of our operations and our products through the adoption of sustainable practices and through continuous improvement in environmental performance and control. Further details can be found on page 65.

Regulatory authorities approval

Catnic's excellence is internationally recognised.

Catnic lintels have gained the approval of the regulatory authorities both in the domestic and international markets. Such wide-spread comprehensive approval is an assurance to designers, specifiers and builders of the reliability and state-of-the-art quality of the Catnic range.

BBA Certification

Catnic steel lintels are certified by the British Board of Agrément under certificate number 91/2638 and 19/5679.

Fully Part L Compliant

Catnic steel lintels comply with Parts L1 and L2 of the Building Regulations Approved Documents. LABC in England and Wales.

BES 6001 Certification

Catnic lintels are the first of its type to have been certified as responsibly sourced from the iron ore supply to installation.

Local Authority Building Control (LABC)

Catnic steel lintels are compliant with current UK Building Regulations and therefore meet the requirements of the LABC in England and Wales.

National House Building Council (NHBC)

Catnic steel lintels meet NHBC technical requirements.

ISO 9001

Catnic is ISO 9001 accredited, an internationally recognized standard for Quality Management Systems (QMS).

The Environment

Our products are durable, adaptable, reusable and recyclable. Through our research and development activities, we are committed to achieving continual improvement in our environmental performance and pollution prevention, and in supporting government policy for sustainable development.

The Environment

We consider care for the environment to be essential both in terms of our duty to society and to ensure the continuity of our business.

Environmental Policy

In 2010 Catnic achieved the Environmental Management Standard ISO14001 recognition of its environmental management policy.

Our products are durable, adaptable, reusable and recyclable. Through our research and development activities, we are continuing to develop products that give additional social and environmental benefits to our customers and society as a whole. However, Catnic recognise that in our day to day operations we impact upon the environment in a number of ways.

Therefore we are committed to achieving continual improvement in our environmental performance and pollution prevention and in supporting government policy for sustainable development.

In particular we will:

- Integrate environmental management into all our business activities.
- Ensure compliance with all relevant local, national and international legislation and regulations.
- Ensure all staff, including contractors, actively supports our environmental programmes.
- Communicate our environmental policy to all interested internal and external parties and respond appropriately to requests for information.

We will seek to reduce our environmental impacts and improve sustainability through improvements in :

- Energy efficiency and water consumption.
- Waste management and in particular a reduction of the amount of waste we send to landfill.
- Contract management and purchasing.

This policy will be reviewed at least annually and will form the basis of all future environmental improvements.

Global Warming Potential(GWP)

The expanded polystyrene (EPS) incorporated into our pre-insulated lintels does not use, contain or produce formaldehyde, CFC's or indeed any so called soft CFC's (i.e. HCFC's and HFA's). The manufacturer of our insulation product have quoted a GWP < 5 for the finished product.

Ozone Depletion Potential (ODP)

The product conforms to the Montreal Protocol and has an ozone depletion potential of zero. The material content and manufacture of EPS has no major negative impact on the environment.

Health and Safety Policy

Catnic actively work towards Tata Steel's own international safety rating system and have one of the highest scores amongst all Tata Steel manufacturing sites in the UK.

- We believe that all our activities can be undertaken safely and we will never compromise safety.
- We will conduct our business in a way that ensures the health and well-being of our employees, contractors and any person affected by our activities.
- Everyone in Tata Steel has responsibility for their own and others' health and safety.
- We know that continuous improvement of our health and safety performance is essential for a successful company.
- We will encourage a health and safety culture in Tata Steel. Copies of the Catnic Environmental Policy are available on request or can be downloaded at www.catnic.com/assets/ content/downloads/Catnic-Energy-Policy-2.pdf

Energy Management

In 2024 Catnic achieved the Energy Management Standard ISO 50001 recognising it's commitment and efforts to reach Net Zero by 2030. It applies to organisations of any size, and provides requirements for establishing, managing and improving their energy consumption and efficiency.

Sustainability Commitment

At Catnic we have pledged to reduce our carbon footprint to become a Net Zero Business by 2030. To achieve this aim we are focussing on decarbonisation of our plant and products, maximising our material efficiency, developing more sustainable products and achieving biodiversity net gain.

Our sustainability commitment

- To reduce our carbon footprint to become a Net Zero Business by 2030
- To continuously develop products and services that support the construction market's drive towards sustainable construction – reuse, reduce and recycle
- To ensure transparency in performance through creating EPDs for our full product range, and 3rd party accreditation including BES 6001, ISO14001 and ISO50001
- To be an employer of choice with Zero Harm and Wellbeing as core values
- To maximise our material efficiency, minimising on-site waste and maximising waste recovery, with a target of zero waste to landfill by 2030

- To switch to more sustainable packaging alternatives and eliminate single use packaging by 2024
- To reduce our transport emissions through a phased transition to electric or HVO for all on and offsite vehicles and deliveries
- To protect and expand the biodiversity that co-exists on our sites and in our local communities
- As part of Tata Steel, to retain Supply Chain Sustainability School Gold Member status

We are the only UK lintel manufacturer to be certified to BES 6001 covering the Responsible Sourcing of Materials.

However, we recognise that in our day to day operations we impact upon the environment in a number of ways. Therefore we are committed to achieving continual improvement in our environmental performance and pollution prevention and in supporting government policy for sustainable development.

Environmental Product Declarations (EPDs)

The environmental impact of products can be assessed using standards such as BS EN 15804, using environmental product declarations (EPDs). EPDs contain information covering some or all stages of the product life cycle from raw material extraction, manufacture and fabrication, to use and end-of-life. In addition to quantified environmental information, an EPD contains a description of the manufacturing route, and a technical description of the product.

As an approved EPD programme operator, Tata Steel has produced externally verified product-specific, Type III environmental product declarations (EPDs) that comply with EN 15804 and ISO 14025 and cover our full standard lintel range. Externally verified, product-specific type III EPDs allow optimum resource decisions to be made, and they demonstrate the sustainability of our steel building products.

These EPDs can be downloaded from our website, and further product environmental datasheets (PEDs) are available on request - email catnic.marketing@tatasteeleurope. com detailing which lintel you require.

Help when you need it

Fully committed to providing first class service support.

Technical Service Package

The Catnic service package includes:

- Experienced and dedicated team of lintel sales representatives
- Fully trained, professional internal customer support team for all your needs; from placing orders, to enquiring about prices or deliveries
- Comprehensive range of back-up literature
- On-line help via catnic.com
- Full range of BIM / CAD files available to download on catnic.com
- Technical enquiry forms to accompany your drawings ensuring necessary information is received and turned around in a timely manner
- On-site sales and technical support when required
- Technical hotline for all queries
- · Dedicated hauliers for all your deliveries
- · Consultation at every stage of your job
- Lintel scheduling and specification via

- Next day delivery available on selected items
- Extensive range of standard and bespoke lintels

Technical support

Experienced engineers qualified in construction enable Catnic to offer an advisory service to anyone engaged on building projects, regardless of size, from a private house extension, to a major housing development or commercial building.

Free scheduling service

CLASS – The Catnic Lintel Advanced Scheduling System is the most comprehensive, enviable lintel scheduling service available. One concise document leaves no room for confusion or misunderstanding.

CLASS clearly provides:

- A description of each lintel, its location, price and delivery time
- Guaranteed structural accuracy
- A site summarv

To access the benefits of CLASS visit www. catnic.com/products/lintels/request-a-free-schedule and upload your project details today or simply send your project drawings (dimensional plans, sections and elevations), floor and carcass layout, (along with a copy of the technical enquiry form in the back of this Product Selector) to our Technical team.

Design service for bespoke lintels

In addition to its standard range, Catnic design and manufacture a huge range of 'specials'. The bespoke range is designed and fabricated to satisfy features such as long spans, chamfered brickwork, reduced toe lintels for cant bricks, arched openings and other applications where non-standard construction is utilised. For further information please turn to page 52 of this guide.

Catnic is committed to providing the building industry with new and improved products, borne from investment in design and manufacturing technologies.

BES 6001

Catnic is the first lintel manufacturer to be certified to BES 6001 so you can rest assured that you are specifying/using a sustainable product and can maximise the potential for obtaining credits under the Responsible Sourcing of Materials sections of BREEAM, the Code for Sustainable Homes and CEEQUAL. Certification of all our steel construction products to BES 6001 provides independent verification of our corporate responsibility, including the way we drive sustainability considerations

up the supply chain to the point of raw material extraction. It delivers a method for us to benchmark and show that we are continuously improving our sustainability credentials.

Catnic's sales and technical teams are dedicated to matching the quality of our products with the excellence of our service, from the professional voice at the end of the telephone to our on-site consultation.

Full service support for customers Catnic has been at the forefront of lintel design for over 50 years. Our reputation for exceptional quality and technical expertise has ensured customers satisfaction and loyalty in the products and services that we offer.

Catnic's team:

- Are professional and experienced
- Are extensively trained
- Have comprehensive product and industry knowledge
- Have a committed parent company -Tata Steel.

Where to use a separate DPC

To satisfy NHBC and Zurich Municipal technical requirements, Catnic lintels only require a separate DPC in severe exposure zones i.e. zones 3 and 4 of the map and as determined by BS 8104.

NHBC Amendments Oct 1992 require a separate damp proof protection for all lintels in Scotland, Northern Ireland, the Isle of Man and in areas of severe or very severe exposure to driving rain, as defined under BS EN 1996-1-2: 2010 and BD6697: 2010. The map indicates typical exposure categories. In such cases, a cavity tray/damp proof protection should provide an impervious barrier draining water outwards. It should have an overall minimum upstand of 140mm, returned to the inner leaf masonry and be so shaped that there is not less than 100mm vertical protection above a point where mortar could collect.

Where exposure conditions or local building regulations demand a separate DPC, Catnic cavity wall lintels not only provide additional protection against the elements but also act as a support and

Exposure Zones Approximate wind driven rain (litres/m² per spell)

1 (SHELTERED) LESS THAN 23

2 (MODERATE) 33 TO LESS THAN 56.5

3 (SEVERE) 56.5 TO LESS THAN 100

4 (VERY 100 OR MORE

template for the DPC, making it easier to install and with less risk of damage. The DPC should project at

The DPC should project at least 25mm beyond the outer face of the cavity closer and vertical DPC.

It should provide drip
protection for the door and
window heads and cover
the ends of the lintel to
ensure moisture is shed
clear of the reveals. For all
coastal site applications
where the soffit of the
lintel is exposed, the
use of a soffit cladding in
conjunction with a separate
DPC is highly recommended to
improve appearance and extend normal

maintenance periods.

Guide to safe storage and handling

All products should be used in accordance with their specific instructions to prevent failure.

Storage

- All products should be stored in a clean and dry environment on a firm even surface, clear of the ground
- Single lintels should be stored on pallets or suitable racking and prevented from being accidentally dislodged
- Remove all metal strapping with care and discard safely and responsibly

Handing

 Gloves should be worn to avoid injury from any sharp edges

- When lifting or carrying a lintel, under take a personal risk assessment paying attention to the size and weight details found on the product label
- Processes such as welding, burning, cutting or grinding can result in vaporising the metal or generating airborne particles that may present additional hazards

Application

- · Do not use damaged goods
- Refer to Installation Guides detailed on pages 16 and 17 for Cavity wall installation guidance, and page 37 for Timber frame installation guidance

Disposal

 When disposing of any Catnic products or packaging, due consideration must be given to the environmental impact of the method of disposal

Control of Substances Hazardous to Health Regulations 1994 (COSHH)

- All products are considered nonhazardous to health under normal conditions of use
- Copies of COSHH sheets are available on request

Technical Information

The Research, Development and Technology business of Tata Steel combines top class innovation and cutting edge technology to deliver 'metals solutions' in a constantly changing world.

Structural performance

The structural data published in the loading tables included in this technical guide, was achieved in accordance with the requirements of BS EN 845-2: 2013 + A1: 2016.

Extensive testing was undertaken at the following test houses:

- The University of Wales, School of Engineering
- The University of South Wales, Commercial Services Centre for Engineering, Research and Environmental Applications (CEREA)
- Ceram Building Technology, Stoke-on-Trent

Safe working loads (SWL)*,

As defined by BS 5977: Part 2: 1983 for cavity wall lintels refer to uniform distributed loads applied in the inner to outer leaf ratios:

- 1:1 for lintels supporting masonry only
- 3:1 for lintels normally carrying timber floors
- 5:1 for lintels normally carrying concrete floors

The CH, TH, CX, and TX lintel range refers to uniformly distributed loads in the ratio of 19:1 when nonstandard or unusual loading conditions occur.

A lintel should not exceed a maximum vertical deflection of 0.003 x the effective span (effective span = distance between centre of bearings) when subjected to the safe working load (SWL).

* The brochure SWL's are based on the lesser value derived from a serviceability deflection limitation of:

$$\frac{\text{EFFECTIVE SPAN}}{325} \quad \text{OR} \quad \boxed{\frac{\text{ULTIMATE FAILURE}}{1.6 \text{ (min)}}}$$

Fire tests

Catnic lintels have been independently tested in accordance with the relevant parts of BS 476, Methods of Determination of the Fire Resistance of Loadbearing Elements of Construction.

Details of the test results can be found in TRADA (Timber Research and Development Association) Nos. FR254, 275, 659, 863, 1662 and RF94015 and FROSI (Fire Research Organisation) No. 5001.

We use up to the minute technology to expand and improve the quality of our performance; we continually invest in and upgrade our manufacturing processes and use the latest methods in process analysis and design.

Glossary of technical terms

Lintel

A structural member spanning an opening in a wall.

Clear span or Clear opening

The clear distance between lintel supports.

Safe working load (SWL)

The total uniformly distributed load (UDL) that the lintel is designed to support, whilst providing an appropriate safety factor.

Triangulated masonry load

A load assessed in accordance with the guidelines of BS 5977 Part 1: 1981 and AMD 4796: 1985.

Uniformly Distributed Load (UDL)

A load that is uniformly spread along the entire length of the lintel.

Point load

The load applied from a single member such as a steel beam or girder truss. It should be spread over an appropriate area so that the limiting design values are not exceeded.

Moment of inertia (Ixx)

Represents the moment of inertia or second moment of area of the lintel section about a horizontal axis through the lintel centroid indicating the stiffness of a lintel under a given load and indicative of the lintel shape. The greater the lxx level, the stiff er the lintel will be and hence the less a lintel will deflect.

Deflection (δ)

Vertical/horizontal displacement of the lintel due to bending about the vertical/horizontal axis.

Modulus of elasticity (Zxx min)

The section Modulus of the lintel about a horizontal axis, when multiplied by the permissible working stress, the resultant value is the serviceability moment.

Serviceability reaction

The permissible load at an end support within the working load capacity of the lintel webs.

End bearing

The bearing length at lintel supports.

Psi value (Ψ)

A psi value is the measure of additional heat loss at a linear junction in the building fabric and is measured in W/mK.

Material Specifications and Clauses

Steel Lintels

Cavity Walls

Provide insulated steel lintel with built-in damp proof course and integral plaster key, manufactured and designed in accordance with BS EN 845-2:2013 +A1:2016

| Cavity Walls | | | |
|-------------------|--------------|--|-------------|

| MATERIAL | | ED STEEL COATED TECTION SYSTEM. | WITH DUPLEX |
| INSTALLATION | | WITH A MINIMUM RAISE INNER AND GETHER. | |

CG, TS, CH, TH, CX and TX ranges

The lintels are manufactured from galvanised steel to BS EN 10346: 2015 (continuously hot-dip coated strip and sheet of low carbon steels and cold forming - technical delivery conditions) of grade Z275, but with a minimum yield stress of 250N/mm². The lintels are further protected against corrosion by a black coloured polyester resin coating applied to all external surfaces. The CG lintels are fully insulated with expanded polystyrene bead of density 18kg/ m³ giving a thermal conductivity of between 0.031W/mK and 0.036W/mK.

The CH and CX lintels are fully insulated with expanded polystyrene board manufactured in accordance with BS 3837: Part 1: 2004 (expanded polystyrene boards specification for boards manufactured from expandable beads). The material is CFC and HCFC free and has an ozone depletion potential (ODP) of zero.

Single Leaf Walls

Steel lintels manufactured and designed in accordance with BS EN 845-2: 2013 + A1: 2016.

MBA and ANG

The lintels up to 2400mm are manufactured from galvanised steel to BS EN 10346: 2015 (continuously hot-dip coated strip and sheet of structural steels – technical delivery conditions) of grade Z600. All external lintel cut edges are treated with a corrosion resistant paint. Lintels over 2400mm are further protected against corrosion by a polyester resin coating applied to all external surfaces of the lintel.

CCS range

The lintels are manufactured from galvanised steel to BS EN 10346: 2015 (continuously hot-dip coated strip and sheet of low carbon steels and cold forming – technical delivery conditions) of grade Z275, but with a minimum yield stress of 250N/mm². The lintels are further protected against corrosion by a polyester resin coating applied to all external surfaces of the lintel.

Other Applications

Provide insulated steel lintels with Duplex Corrosion Protection system, manufactured and designed in accordance with BS EN 845-2: 2013 + A1: 2016.
