*Cavity insulation must be continued down to lintel base plate

CG lintel psi values quoted take into account any additional heat loss that occurs through the discrete brackets within the lintel. CG Lintel psi values based on 1500 mm long lintel design

To limit the risk of surface condensation or mould growth the temperature factor for a detail used in the external wall of a dwelling must be greater than 0.75. Used in the above details, the Catnic CG, CH, CX and CXL lintels all have temperatures factors greater than 0.75.

All calculations have been carried out following the conventions set out in BR 497.
